LUPREC system variable

Function Description:

The **LUPREC** system variable is used to set display precious for linear units and coordinates.

Type : Integer
Saved in : Drawing
Initial value : 4
Range : 0 ~ 8

No matter how to set the display precious, the value for distance, area, and volume and linear coordinate internal precious are always maintained. The **LUPREC** does not have effect on dimension text. The dimension text is controlled by **DIMDEC** system variable and saved together with dimension styles.
