THICKNESS system variable

Function Description:

The **THICKNESS** system variable is used to set default 3D thickness property when creating 2D geometric objects.

Type : Real
Saved in : Drawing
Initial value : 0.0000

Note: when users want to add 3D thickness to new created objects by **RECTANG** and **TEXT** commands, there is one exception, the 3D thickness property will use Property palettes or separate settings by **CHPROP** command. The single text must be SHX font to accept 3D thickness.
