CUIEXPORT command

The **CUIEXPORT** command is used to export the customize settings in the main CUIx files to enterprise or local CUIx files.

Command Access:

Menu : Tools > Customize > Export Customizations...
Command : CUIEXPORT

Function Description:

Users could transfer customization information between the main CUIx files and the local CUIx files. Open the "Transfer" option in the Customize User Interface, the main CUIx files (gcad.cuix) display in the left panel. Users could drag one item from one CUIx file to another CUIx file. Click the "Apply" button to save changes and view updated CUIx file.
