OPEN command

The **OPEN** command is used to open the existing drawing.

Command Access:

Menu : File > Open
Command : OPEN

Function Description:

Users could open or load part drawings including specified geometrics in viewports or layers. In the "Select Files" dialog box, click button of the "Open" button and select "Open Read-Only". If the FILEDIA system variable is specified to 0, the OPEN command will only display command prompt without dialog box. Note: if the opened drawing containing macros, the "Macros AntiVir" dialog box pops up.
