

# QTEXT command

2308 GstarCAD MY /KW August 20, 2021 [CAD Commands](#) 0 767

The **QTEXT** command is used to control the display and printing of text and its properties.

## Command Access:

**Command :** QTEXT

## Function Description:

If the QTEXT is in ON mode, all text objects and their properties objects will be displayed as frame of texts. Under this mode, it could save a lot of time to redrawing and regenerating for drawings with a large number of texts
