VBALOAD command

The **VBALOAD** command is used to load an overall VBA project to current task.

Command Access:

Ribbon : Manage > Applications > Load Project
Menu : Tools>Macro> Load Project...
Command : VBALOAD

Function Description:

The VBA project is saved as a separate file with ".dvb" extension. When it is loaded from the "Macro" dialog box, the module and macro of VBA project will be obtained. There is no limit to number of VBA project to be loaded. The selected project reference in any projects could be loaded too.
Users could not load embedded VBA project from dialog box. If there is embedded VBA project in drawing, it will be loaded as opening the drawing and unloaded as closing the drawing.
If specifying the FILEDIA to 0 or inputting "-vdaload" under the command prompt, it will display command prompt.
