Restore from a System Failure
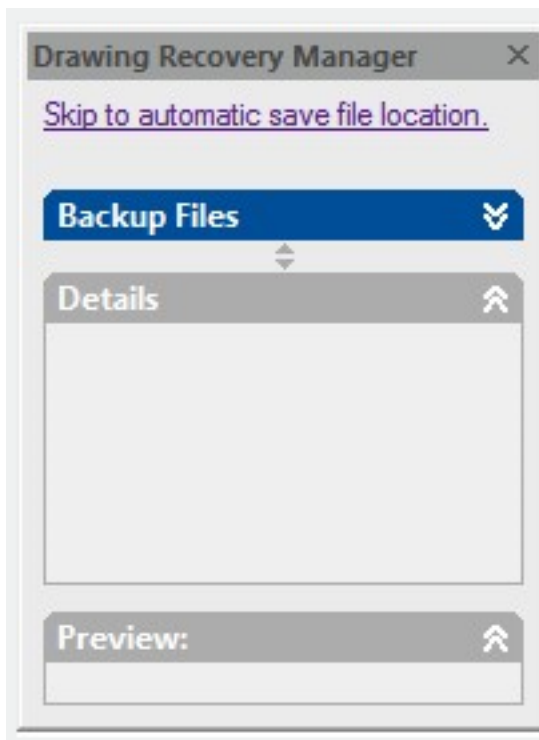

If this program terminated unexpectedly, because of a hardware problem, power failure or a software problem, you can restore the drawing files that were open at the time of termination.

You can save your current work to a different file when the program fails. The format used for this file is DrawingFileName_recover.dwg, DrawingFileName is the file name of your current drawing.

Resolve Drawing Files

When a program or system failure occurred, the next time you start GstarCAD, the Drawing Recovery Manager will open automatically.
