

# Overview of Object Properties

2470 GstarCAD MY /KW September 2, 2021 [Workflow](#) 0 985

Every object has properties. Some [PROPERTIES](#) are general and apply to most objects; for example, [LAYER](#) , [COLOR](#) , [LINETYPE](#) , lineweight ([LWEIGHT](#)) and [PLOTSTYLE](#) .

Most general properties can be assigned to an object by layer or can be assigned to an object directly.

- If a property is set to BYLAYER, the object uses the property of the layer on which it is drawn.
- When a property is set to a specific value, that value overrides the value set for the layer.
