

Change the Color of an Object

2478 GstarCAD MY /KW April 14, 2022 [Workflow](#) 0 1585

If you want to change the color of objects, you can either identify a color for objects, move objects to another layer or change the layer color. There are three options available:.

- you can move the object to another layer with a different color.
- If the object's color is set to BYLAYER, You can change the layer color.
- You can change color of each object individually.

If you change the current color setting on the Properties toolbar from BYLAYER to a specific color, all objects are created after the change will automatically use the new color.
