

Load Linetypes

2481 GstarCAD MY /KW November 9, 2021 [Workflow](#) 0 1344

You can load `LINETYPE` at the start of a project or when you need them.

Linetypes are stored in an LIN (linetype definition) file, you can load linetypes in a LIN file whenever you want use it.

Depending on what measurements you are using, you can choose the linetype definition files `gcad.lin` (imperial) and `gcadiso.lin` (metric) units, which are both available in this program.

If you want to get rid of unreferenced linetype information, you can use [PURGE](#) or delete the linetype in the Linetype Manager. You can not remove BYBLOCK, BYLAYER and CONTINUOUS linetypes.
