External Reference Relocate

2624 GstarCAD MY /KW November 10, 2021 Workflow 0 806

With this function, our software can recognize the reference in the drawing and give you the reference state, if you want to select another reference path, click the "Relocate" button and the reference will be displayed in the drawing again.

Menu: Express>Blocks>External Reference Relocate

Command Entry: CHGXREFPATH

Operation steps:

1.Start the command and a dialog box will pop up.

🥑 External I	Reference Automat	ically Search Path	×
Reference name:			
Name	Path	state	
[Drawing2]	C:\Documents and Setting	s\Administrat Located	
Relat	ive Path Relocate	Exit	>

2.Select the external reference name which you want to modify.

3.If you click the "Relative Path" button, you will get a relative path of the reference; If you click "Relocate" button, the system will relocate the external reference
