

Text Align

2630 GstarCAD MY /KW November 11, 2021 [Workflow](#) 0 687

As the name describes, this function is used to align text. You can select several texts in your drawing to align along X or Y coordinates, or along a line of specific direction. You can access it from:

Menu: Text >Text Align

Command Entry: Textalign

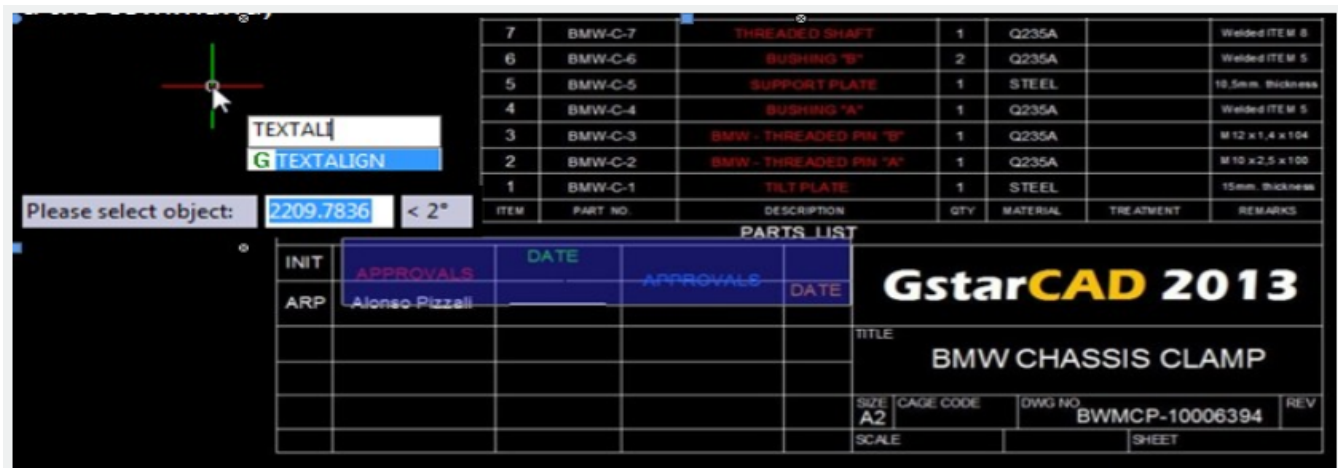

For example, when we create a table or part list and some contents are not in the correct location, using this tool improves the efficiency of adjusting text. After the command is started, a message will display>

Please select object:

Then select the text(s) to be aligned:

After selecting the text(s), a message will display > Select the align method: X axis (X) / Y axis (Y) / Two points (P):

In this case, we choose the Y axis align method and then specify a point to align the texts in the correct location. The result is as follows:

After selecting the text(s), a message will display > Select the align method: X axis (X) / Y axis (Y) / Two points (P):

In this case, we choose Y axis align method and then specify a point to align the texts in the correct location. The result is as follows:
